

CMDS Test Set

Your countermeasures react as a system, so test them as a system.

Verify the firing location and time intervals of ALE-40 and ALE-47 programmed Mission Data Files.

Collect firing sequence data for up to 16 dispensers simultaneously. See which dispensers fired, in what order, and the time intervals down to 1 millisecond.

key features

- Scalable, distributed architectures.
- Simple Windows® user interface.
- Provides dummy load for sequencers.
- Single collector unit powers all testers.

key benefits

- Test up to 16 dispensers simultaneously.
- Easy setup and analysis.
- Determine precise firing patterns.
- Sequencers can poll and fire as if magazines were in system.
