

World-Class Embedded System Test Equipment and Engineering Services

Test Equipment

SystemTrace® is a modular, distributed instrumentation system that is used to develop, maintain and monitor embedded systems. Monitor Probes are available for MIL-STD-1553 and VME.

C-TAC Plus® (Computer Tester Analyzer Controller) is the key instrumentation in many of the most advanced embedded system development labs in the world.

C-TAC Plus® can be tailored to support practically any legacy processor.

The CMDS Firing Pulse Interval Test Set is a suite of test components designed to analyze firing pulse timing from a Counter measures Dispensing System such as the ALE-47.

Engineering Services

ITCN assists with design and test issues; designs and tests both software and hardware instrumentation for embedded systems; and supports advanced prognostic and diagnostic tools.

ITCN offers unparalleled application support and customer service through an array of options from basic technical support to in-house engineering and design services.
